

elegans mundus

Theme Name: Elegans Mundus
Release Date: 01 Feb 2007
Demo Showcase: [Click here](#)

Tested on: Joomla!, Mambo
Valid CSS and XHTML 1.0 Transitional

- A:** Suckerfish DropDown menu (source code)
- B:** Headers (source code)
- C:** Login
- D:** Pathway (Joomla! default)
- E:** User1
- F, G, H:** User2, User3, User4
- I:** User5
- J:** Mainbody (Joomla! default)
- K, L, M:** User6, User7, User8
- N:** Banner
- O:** Right
- P:** Footer (source code)
- Info:** See additional notes below.

Configuration:

■ **Suckerfish multilevel DropDown menu**

By default, the dropdown menu calls **dropdown** menu (case sensitive), so you will need to create this new menu through the Menu configuration section in your admin back-end. *In case* you would like to modify the default menu from the source code, open **wr_config.php** and modify the following line: `$menu_name = "dropdown";` and change with another menu name, like: `$menu_name = "mainmenu";`

■ **Headers**

Elegans Mundus source code has been set to load 4 different header images in the following component sections: **com_frontpage, com_content, com_weblinks and com_contact**. If you would like to modify this, you will need to edit the **index.php** file. For any question about this feature do not hesitate to [contact us](#) or visit the [WR forum](#) if you are a WR eClub member.

■ **Login (new module position)**

As the template will require a non-standard Joomla! module position, you will need to add it through your Joomla! administrator backend. Click Site, Template Manager and Module Positions and add the **login** (case sensitive) module position in one of the empty fields.

This module is a floating box located in the right side of the header image. In our demo showcase we did publish the Login Form Module in login position and set visible only on frontpage from the Pages/Items list. The same setting has been applied to User Menu module position. **Please do not forget to set the Menu Class Suffix parameter to -none** for User Menu module position or the User Menu will not display correctly.

■ **Pathway, MainBody**

Automatically used by Joomla!

■ **User1, User2, User3, User4, User6, User7, User8**

In these modules, you may publish any content you wish. Being fully collapsible modules, if there are no modules published, the entire block will collapse.

■ **User5**

This module is available just on top of the MainBody. This will give you the opportunity to publish any content just above the MainBody. Being also a fully collapsible module, if unpublished the entire module block will collapse.

■ **Banner**

Module position for Banner Module.

■ **Right**

This column is for modules published in the right column. Elegans Mundus includes **5 different classes** for the right modules so every module title can have a different icon. See additional notes below and also the [Demo Showcase](#) to see the icons in the published right modules.

Note for menu modules in right module position: You must set in Module Class Suffix -menu for menu modules to display correctly.

■ **Footer**

To modify the footer links and copyright information you will need to open **wr_footer.php**.

Additional notes:

■ **Extra classes for right modules**

If you would like to have a different icon based on your module content, find below the class suffix that needs to be set in **Module Class Suffix** field

- Standard icon: (leave it just empty)
- For menu modules: **-menu** (mandatory for menu items)
- For RSS modules: **-rss**
- For Statistic modules: **-stats**
- For Featured modules: **-special**

■ **RSS custom icon**

Locate the **custom_rss.gif** file from the elegans mundus images folder and upload it through the Joomla! media manager in the **M_images** folder. When done locate the Syndicate module through the Joomla! modules manager, disable all RSS images (except RSS 2.0), and select from RSS 2.0 Image field **custom_rss.gif**

■ **Fonts used in the Photoshop template**

Trebuchet MS, Verdana, Lucida Grande.
